PRODUCT DESCRIPTION

Worry Free Bathing

This bench allows the user to go from the toilet to the bathtub with ease and reduces the risk of falling during transfer. The cut out seat allows for perineal washing and effective bathing at home or in an assisted living facility. The durable aluminum construction provides strong support up to 350 lbs.

Made to Fit Any User

The XX-Long Toilet-to-Tub Transfer Bench is customizable and can be adjusted to fit the needs of any facility or user. It can clear up to 19" tall bathtub walls, and the adjustable height is able to adapt to users of varying heights. Handles can be attached or removed for added stability and the strap ensures security no matter who is using it.

Durable Materials

The entire system is made of durable, blow-molded plastic and high-tensile aluminum that doesn't break, bend, or warp under stress. The bath chair is easy to tear down and put back together without worry of wearing out the components. The XX-Long Toilet-to-Tub Transfer Bench is easy to take with you on vacation, use at home, or take on the go, anywhere else you may be staying.
